

# Third peer review for MMDF

Oleg Maslov, Nikita Balabin

May 25, 2021

Unfortunately, the run Visualization part failed, because the dataset used was not loaded on the git. However, looking at the notebook, it seems that if the dataset was loaded, everything would work well. The ECG part was fine. The results are quite reasonable. The problem that this package solves is important, and we think that if we continue to develop this project, it can be recommended for real-world problems.
